

DigiDigi User Research

What beginner camera buyers actually need before they feel confident enough to choose.

Research Method

Bilingual Azerbaijani–English online survey focused on how people research, compare and choose cameras. The goal was to identify recurring needs, pain points and design opportunities for DigiDigi.

12 responses

Beginner-focused

Participant Snapshot

Most respondents closely match DigiDigi's intended beginner audience.

Portability matters

Size / portability was a major consideration

Where users research first

People currently piece together information from multiple sources.

A few respondents also mentioned AI / LLM tools.

How difficult is choosing the right camera?

Average difficulty score: 3.25 / 5

41.7% rated the process difficult or very difficult (4–5).

Top Pain Points

The strongest frustration is not technical complexity by itself — it is uncertainty about value.

What users asked for

“Less technical language.”
“Find a good camera at the price I want.”
“Compare relevant cameras in one place.”
“See real photo / video results.”

Research Themes

01 Value & Budget Confidence

Users need help understanding whether a camera is worth its price.

02 Beginner-Friendly Language

Technical specifications need clearer, simpler explanations.

03 Trust & Real-World Evidence

Reviews, expert opinions and real shots increase confidence.

04 Guided Discovery & Comparison

Personalized recommendations should lead, with filters and compare as support.
